

CAR FIRE BLANKETS

The car fire blankets from Express Fire are flame retardant and control car fires. Suitable for use on most cars, including SUV's and off-road vehicles, they are manufactured from fibreglass and covered with a polymer on both sides. For safety reasons, they incorporate 6 grips for correct placement and operation by 2 people is recommended. Includes a textile storage bag with shoulder straps for easy transportation and storage. In electric vehicles, the blanket reduces toxic waste gases and prevents the fire from spreading to other part of the vehicle. In other vehicles, the fire blanket suffocates the fire as quickly as possible, preventing the fire from spreading to other vehicles, buildings and structures.

- Available in single and multi-use options
- Large 6.0m x 8.0m blanket size
- Suitable for all cars, SUV's & manual handling equipment
- Performs at temperatures up to 1,300°C (peak)
- High performance fibreglass and polymer construction
- Durable textile storage bag with shoulder straps
